

NOAA TRANSMITTERS - ALABAMA

Not all weather band receivers have this capability, but all radios that receive NOAA Weather Radio can receive the emergency broadcasts.

The warning alarm device is tested each Wednesday, usually between 11 am and noon, weather permitting.

A feature available in the newest weather radio receivers called SAME, Specific Area Message Encoding, allows weather radios to be programmed for the reception of critical weather information for counties in your area.

Location	Frequency(Mhz)
Arab	162.525
Auburn	162.525
Birmingham	162.550
Brewton	162.475
